1 Pancake Graph

In the lecture, you have encountered several different graphs as underlying network structures, e.g. for peer-to-peer (P2P) networks. Here, we will look at the Pancake graph $P_n$.

Recall the definition of the pancake graph $P_n$ is defined as follows: The vertex set is $V(P_n) = \{(v_1, v_2, \ldots, v_n) \mid v_i \in \{1, \ldots, n\} \text{ and } v_i \neq v_j \forall i \neq j\}$.

In other words, $V(P_n) = S_n$, the group of all permutations on $n$ elements. There exists an edge of dimension $i$ for $2 \leq i \leq n$ when

$$e_i = \{(v_1, \ldots, v_i, \ldots, v_n), (w_1, \ldots, w_i, \ldots, w_n)\} \in E(P_n) \iff w_j = v_{i-j+1} \text{ for } 1 \leq j \leq i \text{ and } w_j = v_j \text{ for } i < j \leq n,$$

or, we can say that an edge $e_i$ represents a prefix reversal

$$(v_1, \ldots, v_i, v_{i+1}, \ldots, v_n) \leftrightarrow (v_1, \ldots, v_1, v_{i+1}, \ldots, v_n).$$

For the following questions, where appropriate, give your answers in terms of $N := |V(P_n)|$ (approximately), the number of vertices, as well as $n$.

a) Draw (nicely!) $P_n$ for $n = 2, 3, 4$. Try to describe a pattern for drawing $P_n$ for any $n$.

b) What is the degree of each vertex in $P_n$?

c) Can you give bounds on the diameter $D(P_n)$ of the pancake network?

d) Show that $P_n$ is Hamiltonian for $n \geq 3$. (A Hamiltonian path is a path in a graph that visits each vertex exactly once. A Hamiltonian cycle is a Hamiltonian path which is a cycle. A graph is Hamiltonian if it contains a Hamiltonian cycle.)
